**ISO - ISO 26262-1:2018 - Road vehicles - Functional safety**

A car (or automobile) is a wheeled motor vehicle used for transportation. Most definitions of cars say that they run primarily on roads, seat one to eight people, have four wheels, and mainly transport people rather than goods. Cars came into global use during the 20th century, and developed economies depend on them. The year 1886 is regarded as the birth year of the car when German inventor

Cities Safer By Design – World Resources Institute

Without new initiatives on general road safety, the safety effects of the current approach will no longer be able to off-set the effects of increasing traffic volumes. Therefore, the safety performance of vehicles needs to be further improved as part of an integrated road safety approach and in order to protect vulnerable road users better

Road types – Wazeopedia

To use this chart, first determine the functional class of a road, and whether it is a signed, numbered highway in a particular highway system. Where the column for the road's highway system and the row for the road's functional class meet, you will find the proper road type for that particular road. A number of examples are given below the chart.

20 Safety Tips for Driving | LoveToKnow
